Anti-virus and anti-spam scanning of proxy server traffic and Qbik WinGate SMTP server traffic

Dr.WEB®
since 1992

A gateway is a company's first level of protection. Its entire business can depend on how well it copes with cyberattacks.

All of a company's business processes depend on its mail system working flawlessly and being free of viruses and spam.

Dr.Web for Qbik WinGate

Protects corporate email
Scans mail for spam.

Protects against zero-day exploits
Detects unknown threats at the moment of attack.

Detects malware in Internet traffic
Detects malicious objects transmitted via the HTTP and FTP protocols, including infected archives, file bombs, adware, dialers, jokers and riskware.

When used, Dr.Web for Qbik WinGate significantly reduces the amount of money enterprises spend on anti-hacker protection and makes their business processes operate more seamlessly.

Anti-virus and anti-spam scanning of messages transmitted via the SMTP and POP3 protocols, including attachments.

Anti-virus scanning of files and data transmitted via the HTTP and FTP protocols.

Curing infected files transmitted via the HTTP protocol.

Adjustable scanning parameters:
maximum size and types of scanned objects, actions that can be performed with infected objects. Automatic virus database updating.

Detection of malicious objects compressed with multiple packers
The ability to enable/disable the detection of malicious programs (according to their type). When a threat is detected, the Qbik settings dictate what action is to be taken to neutralise it.

An efficient and compact anti-spam
The anti-spam does not require training; customisable actions for different categories of spam. Blacklists and whitelists of electronic addresses.

Your own control panel and a quarantine manager
The isolation of infected files in the Dr.Web quarantine and/or the WinGate quarantine. The option to view the contents of the quarantine and to restore and/or forward quarantined files. Backups of disinfected files are saved in the quarantine.

Error and event logging in the Event Log
The Event Log contains information about the parameters of the modules and, for each infected message and each instance of a virus, notifications about the viruses that have been detected (notification versions available in English and Russian).

Customisable list of scanned data-exchange protocols
Customisable actions for different types of spam, including moving messages to the quarantine and adding a prefix to their subject fields.

Dr.WEB®
since 1992

Dr.Web for Qbik WinGate licensing

Types of licenses	License options
■ Per number of protected users ■ Per-server license ■ Unlimited license	■ Anti-virus ■ Anti-virus + Anti-spam All licensing conditions: https://license.drweb.com/products/biz

! When purchasing licenses to protect both an Internet gateway and the server on which it is installed, customers receive a **20% discount**.

Pre-sales support	Technical support
■ Free Dr.Web product testing. ■ Deployment, assistance during the implementation process — by phone or on site (in Moscow only). ■ Presentation, webinar, seminar. ■ Assistance with writing or verifying technical specifications. ■ Free training courses on the administration of Dr.Web products.	■ 24/7 by phone and via the web form at https://support.drweb.com. ■ Russian, English, German, French and Japanese spoken. ■ The cost of support for ex-price and unlimited licenses is negotiated separately. ■ Paid VIP support.

Services

Dr.Web vxCube

- Intelligent and interactive cloud-based analyses of suspicious objects for viruses
- An immediately generated curing utility based on analysis results
- For security researchers and cybercrime investigators

In situations when a malicious file has penetrated the protected system or you have reason to believe that an "impostor" has infiltrated your infrastructure, the cloud-based interactive analyser Dr.Web vxCube is indispensable.

In one minute, Dr.Web vxCube will assess how malicious a file is and provide you with a curing utility that will eliminate the effects of its activity. The examination takes from one to several minutes! Analysis results are provided in a report. Reports can be viewed in your Dr.Web vxCube account area or downloaded as archives.

If a file poses a threat, the user is instantly provided with a custom Dr.Web CureIt! build (if available under their license) that will neutralise the malware and undo any harm it has caused to the system.

This lets you disarm a new threat extremely quickly, without waiting for your anti-virus to eventually receive an update that would address it.

Dr.WEB®
since 1992

Thanks to its versatility, Dr.Web CureIt! can operate without being installed in any system where another (non-Dr. Web) anti-virus is in use; this may particularly come in handy for companies that haven't yet chosen Dr.Web to be their primary means of protection.

Anti-virus research

Malware analysis by Doctor Web security researchers

No automated routine can ever replace the experience and knowledge of a security researcher. If Dr.Web vxCube returns a "safe" verdict on your analysed file, but you still have your doubts about this result, Doctor Web's security researchers, who have a wealth of experience analysing malware, are ready to assist you.

With this service, a malicious file of any complexity can be analysed. The resulting report includes:

- Information about the malware's basic principles of operation and that of its modules;
- An object assessment: downright malicious, potentially dangerous (suspicious), etc.;
- An analysis of the malware's networking features and the location of its command and control servers;
- The impact on the infected system and recommendations on how the threat can be neutralised.

You can submit an anti-virus research request here: https://support.drweb.com

Virus-related computer incident (VCI) expert consultations

If malware has wreaked havoc in your corporate infrastructure and you require the expertise of security researchers to investigate the incident, Doctor Web's information security task force is at your service.
